UPDATED PLUGIN RELEASE: GD TOPIC PREFIX PRO 3.0 FOR BBPRESS

Support for multiple prefixes per topic, new widget, many improvements, and fixes.

Niš, Serbia, March 8, 2021. Dev4Press today announced the release of the updated plugin for WordPress and bbPress: GD Topic Prefix Pro 3.0 for bbPress. Last month, GD Topic Prefix Pro for bbPress celebrated the fourth birthday, and the new 3.0 version represents a huge step forward, bringing the most requested feature to the plugin: the ability to assign multiple prefixes to each forum topic.

The screenshot displays the bbPress forum interface with the GD Topic Prefix Pro 3.0 widget controls. The main content area shows a list of forum topics with various status prefixes (Critical, Normal, Incomplete, Feature, Bug, Confirmed, Won't fix) and a 'Widget as a Shortcode' section. The sidebar on the right includes a 'Filter Topics' button and a 'Topic Prefixes' section with priority and status filters.

Status	Topic	Count	Started by	Time Ago
Critical	Rich Editor Test	2	Milan	19 hours ago
Normal	In dignissimos aut...	3	Milan	3 weeks, 1 day ago
Critical	Vitae aut illo sed qui molestiae.	2	Susie Haley	3 weeks, 1 day ago
		4	Milan R.	11 months, 2 weeks ago
		2	Milan	1 year, 3 months ago
		3	Natalia Hauck	2 years ago
		4	Glennie	2 years, 1 month ago
		3	Tyra	2 years, 3 months ago
		0	Isai Stokes	2 years, 5 months ago

Viewing 10 topics - 1 through 10 (of 12 total)

Detail with the widget controls, multiple prefixes, and new widgets examples

Version 3.0 expands one of the basic concepts – prefixes group – and allows for each forum to have more than one group assigned. Now, you can group your prefixes into groups by using some arbitrary logic, and, when the group is presented for a single topic, you can select only one prefix from each group. So, if you have 3 prefix groups assigned to a forum, when you make a new topic in that forum, for each group you can select one prefix. With all this, the plugin now allows for a much better classification of topics in the

bbPress powered forums, and it can filter topics globally, or inside the parent forums by one or more prefixes.

The new plugin version has fewer global settings than before, and most of the settings are group-level settings allowing you more control over each prefixes group – colors for prefixes, location to display prefixes selection in the form or in the topics list, and much more. Many new options are added also to make group set up better and offer more choice when it comes to displaying prefixes.

Version 3.0 also fixes various bugs, adds a new widget, improves existing widget, adds new shortcodes, improves plugin styling, administration settings, and much more.
